

Metric 1 — UAE-Native PII Detection Coverage

Number of detection patterns for UAE-issued identifiers

BASELINE (BEFORE KAKASHI)	CURRENT RESULT (V1.1.0)	IMPROVEMENT
0 GitLeaks, TruffleHog, Microsoft Presidio, AWS Macie, Google Cloud DLP — none detect Emirates ID, UAE IBAN, UAE mobile, or Arabic names natively	7 Emirates ID (with Luhn checksum), UAE mobile & landline, UAE residence visa, UAE trade licence (Dubai DED / CN / TL), UAE unified ID, UAE IBAN (with mod-97 checksum), Arabic-name detection. Plus 2 international formats used in UAE: ICAO passport, P.O. Box.	+7 patterns New capability

Evidence & reproduction

Source of truth	<code>src/engine/patterns.js</code> (lines 100–186)
Reproduce	<code>kakashi list-patterns</code>
Public URL	https://github.com/Muhammdatef/kakashi/blob/main/src/engine/patterns.js

How to verify

1. Clone the public repository: `git clone https://github.com/Muhammdatef/kakashi`
2. Install dependencies: `cd kakashi && npm install`
3. Run the reproduce command listed above in the "Evidence & reproduction" table.
4. Confirm the current-result number matches this document.

Methodology

Baseline figures cited above are drawn from public product documentation of the comparator tools. Current results are measured directly against the Kakashi v1.1.0 codebase at the git commit tagged in the repository release notes. Every quantitative claim is reproducible in under five minutes on any Node ≥ 18 machine with no vendor accounts required.
