

Metric 3 — Agentic AI Platform Reach

Number of agentic-AI platforms with a pre-integrated Kakashi skill

Evidence & reproduction

Source of truth	<code>bin/install.js</code> AGENTS array – one line per platform
Reproduce	<code>npm install -g @muhammdatef/kakashi</code> → auto-detects every agent present
Public URL	https://github.com/Muhammdatef/kakashi/blob/main/bin/install.js

How to verify

- Clone the public repository: `git clone https://github.com/Muhammdatef/kakashi`
- Install dependencies: `cd kakashi && npm install`
- Run the reproduce command listed above in the "Evidence & reproduction" table.
- Confirm the current-result number matches this document.

Methodology

Baseline figures cited above are drawn from public product documentation of the comparator tools. Current results are measured directly against the Kakashi v1.1.0 codebase at the git commit tagged in the repository release notes. Every quantitative claim is reproducible in under five minutes on any Node ≥ 18 machine with no vendor accounts required.

Project: Kakashi — Sovereign privacy layer for agentic AI
