

Metric 8 — Bilingual (English + Arabic) Coverage

Number of languages supported in CLI, README, and compliance report

BASELINE (BEFORE KAKASHI)	CURRENT RESULT (V1.1.0)	IMPROVEMENT
1 English only — industry standard for open-source privacy tools. Zero international DLP or PII tools ship with native Arabic UI, Arabic-name detection, or an Arabic compliance report	2 Full English + Arabic CLI, HTML compliance report, README, and PDPL article titles. Arabic-name detection via Unicode range \u0600–\u06FF. RTL preservation in DOCX / PDF masking.	+1 language +100%

Evidence & reproduction

Source of truth	<code>src/lib/i18n.js (EN + AR string tables); README.ar.md</code>
Reproduce	<code>kakashi --lang ar scan file.md → Arabic output</code>
Public URL	https://github.com/Muhammdatef/kakashi/blob/main/src/lib/i18n.js

How to verify

1. Clone the public repository: `git clone https://github.com/Muhammdatef/kakashi`
2. Install dependencies: `cd kakashi && npm install`
3. Run the reproduce command listed above in the "Evidence & reproduction" table.
4. Confirm the current-result number matches this document.

Methodology

Baseline figures cited above are drawn from public product documentation of the comparator tools. Current results are measured directly against the Kakashi v1.1.0 codebase at the git commit tagged in the repository release notes. Every quantitative claim is reproducible in under five minutes on any Node ≥ 18 machine with no vendor accounts required.
