

Metric 9 — Quality & Maturity (Automated Test Coverage)

Number of automated tests executed per release

Evidence & reproduction

Source of truth	tests/ directory – 8 files, each a self-contained runner
Reproduce	git clone https://github.com/Muhammdatef/kakashi && npm install && npm test
Public URL	https://github.com/Muhammdatef/kakashi/tree/main/tests

How to verify

1. Clone the public repository: `git clone https://github.com/Muhammdatef/kakashi`
2. Install dependencies: `cd kakashi && npm install`
3. Run the reproduce command listed above in the "Evidence & reproduction" table.
4. Confirm the current-result number matches this document.

Methodology

Baseline figures cited above are drawn from public product documentation of the comparator tools. Current results are measured directly against the Kakashi v1.1.0 codebase at the git commit tagged in the repository release notes. Every quantitative claim is reproducible in under five minutes on any Node ≥ 18 machine with no vendor accounts required.

Project: Kakashi — Sovereign privacy layer for agentic AI
Author: Mohamed Atef Fahmy · Developed in the United Arab Emirates
Repository: github.com/Muhammdatef/kakashi · [npm @muhammdatef/kakashi](https://www.npmjs.com/package/@muhammdatef/kakashi)
Licence: MIT · **Version:** 1.1.0 · **Category:** Agentic AI Solutions Developed in the UAE
